

Antennas receive radio signals. Astronauts used these to talk to NASA. Pictured is Buzz Aldrin.

DEBUNKED

The footage may seem fake. But take an even closer look. What looks like wires is actually part of the spacesuit. The astronauts wore backpacks with radios in them. This was so they could talk with people on Earth. The radios had an antenna. Light reflecting off the antenna looks like wires.

Now look at the flag again. At the top of the flag, there is a rod. This rod sticks out to hold the flag straight. The rod makes the flag look like wind is blowing. It was designed like this on purpose. NASA officials wanted a stiff flag. They wanted it kept upright. After all, the whole world was watching. A blowing flag looks better on camera!
