

This hot rod is not so bright,  
in fact it is dull!

This is a **rat rod**. It is as fast as a hot rod,  
but it looks as if it is not finished.  
Rat rods look cool, fool!

Rust is not as bright as  
red or green!

Raptors have very sharp eyesight. They can see much better than people.

So they can spot their food from high up in the sky, or in the darkness of night.

Raptors have a wide wing span and they can hover or float on the wind. Their wings make no sound. Their prey suspect nothing!

When the raptor sees something to eat, it dives down. The animal or bird cannot escape.

On Wednesday, Amir  
took his football to school.

He played with it  
at break.

A few boys watched  
him play.
