

## Chapter three

# SLOTHS

Sloths live in jungles. They live in Central and South America. They have an odd way of hanging out. They spend their lives upside down. They hang by their claws. Their claws are long and curved. They have strong grips. They don't fall down. They stay hanging even after death.

They do everything upside down. They eat. They sleep. They mate. Their organs are upside down. Their fur grows upside down.

*Sloths can't walk upright on the ground.*

Sloths have slow digestive systems. They only need to use the bathroom once a week. They leave their trees to do this. They go on the ground.
